Now that we have selected Asthma as a RFV let's see how the Search Feature works.
You can either Double Click on the Problem or select it and then click on the Add button.
There is also a Comments field. By clicking in this section of the window it will expose a line that will allow you to type in additional clarifying information about the RFV.

Next we will click on Peak Flow and Female Only Data.
You will also notice that there are multiple check boxes along the top. When you click on these check boxes additional data entry fields appear on the screen.
The Vitals screen performs some automatic calculations as you enter the patient's vitals. Notice the calculated BMI and BSA based on current Height and Weight. In addition the Height and Weight are automatically converted from inches and lbs to cm and kg.

One of the MAJOR BENEFITS of this tool is it's ability to allow a provider to create Customized Templates. These templates can be created and saved in the provider's Templates Collection. By creating a template the data set is refined to that providers internal standard for documentation. To select a pre-defined template simply click on the Templates Icon from the Folder Icons above.
observation. Attempting to document an encounter with the entire data set exposed can be laborious and will result in frustration and have a negative impact on provider productivity.

You can also search for a template by typing in a key word.
In our example today we will limit the template selection to this provider's Asthma template. Once the template is selected simply click on the Load icon above.
Once a template is selected the data elements contained within that template are presented over in the right pane of the window.
By holding down the [Ctrl] key a provider can click on multiple templates and Load them simultaneously. These templates will be seamlessly merged providing a succinct list of data elements. This is especially powerful when documenting a patient encounter for multiple problems (Asthma, HTN, CAD, etc..). A provider can also create Component Templates – templates that address specific sections of a SO note, Physical Exam, ROS, PMH etc..

No fever
No chills
No chest pain or discomfort
No palpitations
Not feeling congested
Chief complaint
The Chief Complaint is:Asthma Followup.
History of present illness
The Patient is a 42 year old woman who reported wheezing. She denied dyspnea or a cough.
She denied a nasal discharge.
Past medical/surgical history
Reported:
Medication history: Prior use of corticosteroids for asthma.
Diagnosis History:
Asthma
Review of systems
Systemic symptoms: No fever and no chills.
Cardiovascular symptoms: No chest pain or discomfort and no palpitations.
Pulmonary symptoms: Not feeling congested.
Notice how all of the ROS findings have been entered into the note...
The next step is to document the Physical Exam by clicking on the PE tab.

Again, the strength of customized templates lies in the tailoring of the data set to only include those findings relative to a specific providers documentation standard. In this case the provider has created a standard PE for Asthma patients. This particular patient has a positive finding of Wheezing. The provider could expand the list and further refine the observation but in this case we will simply select Auscultation Wheezing.

Enough about this tool, there are many other features that will be explained in other classes. For now lets Close Medcin and see how our Encounter Document is progressing…
ability to rapidly sift through the data structure and find a specific term. By clicking on the Find Term button a provider can search for a data element that is not part of their saved template.
of the note writer is the Medcin data structure to late "On-The-Fly". By x Prompt button Medcin will allow you to type in a medical condition and then create a documentation template at the click of a button. The Medcin data structure has over 5 million associations between terms and the data engine utilizes those associations to create a clinically significant template. This is a great way to refine your data set in the event that you do not already have a template created for a particular patient problem.

For brevity I have completed the remainder of the fields commonly noted on an encounter such as:

Clinic for FU
That I **discussed**:
Diagnosis and
Medications
And that the **Patient indicated understanding**.

You will also notice an Admin Options tab. This is for Active Duty to assist with capturing duty status findings. Even though this patient does not have a requirement to document on this tab I would like to show you some of the associated fields.

This brings up the encounter document for your final review and approval. Once signed this encounter is locked and a formal amendment must be made for any future documentation on this specific encounter.
By default the Auto-Print option is selected as is the Count for type of visit. Since we do not have a printer I will uncheck the Auto-Print option.
A few quick points about the Sign Encounter form. Note the check box at the bottom. A provider can identify that they require a Cosigner for this encounter and can identify a specific provider to be the designated cosigner.

Next and LAST is a demonstration of the power and benefit of a Computerized Patient Record. The ability to query your patient population to assess health needs is tremendous. The next slide is an example of a MTF report that can be generated to assist your team in their provision of preventive medical care.

That's All Folks! A few final points. CHCS II is actually a COTS product with some integration of GOTS products. The main application is built on the 3M Care Innovation suite of products. The Military Health System has modified the GUI to look and act more like Outlook but the basic feature set remains a COTS product.
Thank you for your attention today and we look forward to working with you as we bring this program to your facility in the very near future!
- USAF CHCS II Integration Team
(Thanks to Cmdr Mock for creating this great demo!!)
